

Develop a web application in Flask that implements a simple ticket system with different user roles and groups. As a result, there should be a simple authentication mechanism.

- The tickets should have the following properties:
 - Status
 - Pending
 - In review
 - Closed
 - User or Group assignment
 - Note (Simple text field)
- User should be managed by RBAC(Role Based Access Control):
 - Admin
 - Manage all the groups.
 - Manager
 - Should have an assignment for a group - can manage only tickets from the assigned group.
 - Analyst
 - Should have an assignment for a group - can work only with tickets from the assigned group.
- Users groups
 - Customer 1
 - Customer 2
 - Customer 3
